U.S. Patent and Trademark Office PTOL-326 (Rev. 7-05)

Application/Control Number: 10/776,282

Art Unit: 1724

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claim 28 is rejected under 35 U.S.C. 112, first paragraph, because the specification, while being enabling for a sheet having perforation placed on the <u>bottom</u> of the tank, does not reasonably provide enablement for a sheet having <u>perforations</u> placed on the <u>sides</u> of the tank (see page 7, lines 21-23 of the specification). The specification does not enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make the invention commensurate in scope with these claims.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 24-26 and 30 are rejected under 35 U.S.C. 102(b) as being anticipated by Zimmer et al. (U.S. Patent No. 5,417,147; hereinafter "Zimmer"). The reference discloses a tank having a bottom and sides, an inlet and outlet, and an effluent distribution system comprising channels 36b integrally formed in the bottom of the tank, and channels 36a extending along the side walls of the tank (see col. 2, lines 53-59), wherein the bottom channel 36b is open to the inside of the tank, spans opposing ends of the tank, and has an additional intersecting channel (see Fig. 2); and this is all that is required by claims 24 and 30. This reference also shows an inlet pipe 46 extending from an interior to the exterior of the tank (see Fig. 1), and further teaches that the tank

Application/Control Number: 10/776,282

Art Unit: 1724

can be made from a synthetic material (col. 2, line 43); and this is all that is additionally required by claims 25 and 26.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 24-26 and 29 are rejected under 35 U.S.C. 103(a) as being unpatentable over Zimmer in view of Berg et al. (U.S. Patent No. 6,280,614; hereinafter "Berg"). Should it be held that channels 36a of the Zimmer device are not located "in" the sides of the tank, then this primary reference discloses the claimed invention with the exception of these side channels. Berg shows a liquid holding tank having channels located in both its bottom and sides; and it would have been obvious to one of ordinary skill in the art at the time the invention was made to provide additional channels in the sides of the tank of Zimmer, as taught by Berg, in order to assist in the drainage of liquid to the bottom of this tank.

Claim 27 is rejected under 35 U.S.C. 103(a) as being unpatentable over Zimmer in view of Townsend (U.S. Patent No. 3,738,527). The primary reference discloses the claimed invention with the exception of the recited sheet. Townsend teaches lining a liquid storage tank with a protective sheet. It would have been obvious to one of ordinary skill in the art at the time the invention was made to provide the liquid storage tank of Zimmer with a similar sheet-like liner, in order to protect the inner surface of this primary reference tank.

Claim 27 is rejected under 35 U.S.C. 103(a) as being unpatentable over Zimmer and Berg as applied above, further in view of Townsend. Should it be held that channels 36a of the

Application/Control Number: 10/776,282

Art Unit: 1724

Zimmer device are not located "in" the sides of the tank, then the modified primary reference discloses the claimed invention with the exception of the recited sheet. Townsend teaches lining a liquid storage tank with a protective sheet; and it would have been obvious to one of ordinary skill in the art at the time the invention was made to provide the liquid storage tank of the modified primary reference with a similar sheet-like liner, in order to protect the inner surface of this modified primary reference tank.

Claim 28 would be allowed if amended to recite that the sheet is located on the <u>bottom</u> of the tank because the references of record do not teach or fairly suggest a recirculating filter tank system of the type recited, having a sheet that includes perforations such that effluent can flow from a filter to the integral troughs.

Applicant's arguments filed November 9, 2005 have been noted and carefully considered, but no longer appear to be relevant in view of the new grounds of rejection.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to I. Cintins whose telephone number is 571-272-1155. The examiner can normally be reached on Monday through Friday from 8:30 AM to 5:00 PM. If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Mr. Duane Smith, can be reached at 571-272-1166.

The centralized facsimile number for the USPTO is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR
